

*Figure 1: LWD & Boulder site on Mainstem Dement Creek. Notice wideness of creek. Large logs with rootwads and boulders will be needed to keep structures in place.*

*Figure 2: LWD site on Upper Dement Creek. Notice abundance of trees to key logs into. This is an area where boulders will not be needed.*

*Figure 3: Eckley Mountain Road. Notice it's a steep, rocky road with no drainage culverts. Rainfall will quickly wash this road out and deposit the sediment into the creek.*
